ANISH BASNET

Java Backend Developer | Spring Boot | REST APIs | PostgreSQL | React Full-Stack | C++ Systems
Mississauga, ON | theanishbasnet@gmail.com | linkedin.com/in/theanishbasnet | github.com/anishbasnetAB
Authorized to work full-time in Canada on valid PGWP - no sponsorship required

PROFESSIONAL SUMMARY

Java Backend Developer with hands-on experience building Spring Boot REST APIs, service-layer business logic, SQL-backed features, and React integrations. Built Ledger-Core, a transaction-safe banking API with ACID transfers, optimistic locking, idempotent APIs, double-entry ledgering, append-only audit history, and reconciliation. Also brings C++ systems depth from a deployed trading exchange simulator benchmarked at 1.6M orders/sec with 583ns p50 latency.

TECHNICAL SKILLS

Java Backend: Java 21, Spring Boot, Spring Framework, Spring Data JPA, Hibernate, REST APIs, Maven, Bean Validation
Data & Reliability: PostgreSQL, SQL, Flyway, ACID Transactions, Optimistic Locking, Idempotency, Reconciliation, BigDecimal
Testing & DevOps: JUnit 5, Mockito, AssertJ, Docker, Docker Compose, GitHub Actions, CI/CD, Git, Postman, Linux
Full-Stack & Systems: React.js, TypeScript, JavaScript, Node.js, Redis Pub/Sub, WebSocket, JWT, C++20/17, Concurrency

SELECTED PROJECTS

Ledger-Core - Spring Boot Banking API Jun 2026 - Present
Java 21 | Spring Boot | PostgreSQL | Spring Data JPA | Hibernate | Flyway | JUnit 5 | Mockito | Docker | Render | Neon

- Built a production-style money-movement REST API for accounts, deposits, withdrawals, and transfers with ACID transactions, rollback safety, BigDecimal money handling, and consistent JSON error responses.
- Implemented optimistic locking, idempotent transfer APIs, and a double-entry append-only ledger enforced by a database trigger to protect audit history.
- Added automated reconciliation to recompute balances from ledger entries and record discrepancies; verified failure, concurrency, and duplicate-request scenarios with JUnit/Mockito tests.

Real-Time Distributed Trading Exchange Simulator May 2026 - Present
C++20 | Fastify | Redis Pub/Sub | PostgreSQL | WebSocket | React 18 | Docker | GitHub Actions

- Built a C++20 matching engine benchmarked at 1,626,655 orders/sec with 583ns p50 and 958ns p99 latency across 1M orders; supports price-time priority, partial fills, cancels, and GoogleTest coverage.
- Designed backend event flow with JWT auth, Redis Pub/Sub, WebSocket market data, atomic PostgreSQL writes, Docker Compose, and GitHub Actions CI; deployed on Railway and Vercel.

PROFESSIONAL EXPERIENCE

NexGen - Junior Software Developer / Software Developer Intern Jan 2023 - Nov 2023
Java | Spring Boot | REST APIs | SQL | React.js | Git | Jira | Agile

- Developed backend features for a full-stack web application using Java, Spring Boot, REST APIs, and SQL, including controllers, service-layer logic, and database-connected CRUD functionality.
- Integrated backend APIs with React.js UI components, forms, validation, state handling, and API data flow while debugging issues across the frontend, backend, and database layers.
- Used Git branches, pull requests, Jira, Agile workflows, and code review feedback to contribute to feature development and issue resolution.

Additional Experience: Leapfrog Technology - Student Partner (React.js, Node.js, code reviews, collaborative web development), Jan 2022 - Dec 2022; Technobyte - Flutter Intern (Flutter, MySQL, debugging), Dec 2021 - Mar 2022.

EDUCATION

Lambton College - Postgraduate Diploma, Computer Software Engineering | Jan 2024 - Aug 2025
London Metropolitan University - Bachelor's Degree, Computer Science, First Class Honours | Jan 2019 - Sep 2022
Certifications: Getting Started with Microsoft Azure (2025); Responsive Web Design - freeCodeCamp (2023)
