ANISH BASNET

Software Developer | Java, Spring Boot, React
Greater Toronto Area, Ontario, Canada | +1 437-955-1764 | theanishbasnet@gmail.com
linkedin.com/in/theanishbasnet | github.com/anishbasnetAB | anishbasnet.com

TECHNICAL SKILLS

Backend: Spring Boot, Spring Data JPA, Spring Security, Hibernate, REST APIs, API design, microservices, Object-Oriented Programming (OOP)
Frontend: React, TypeScript, JavaScript, HTML, CSS
Data & Messaging: PostgreSQL, MySQL, Redis, Apache Kafka, relational database design, JSON
Testing & DevOps: JUnit 5, Mockito, unit testing, Docker, Kubernetes, GitHub Actions, CI/CD, AWS, Maven
Languages: Java, Python, SQL, TypeScript
Methodologies: Agile, Scrum, code review, Git, GitHub, Linux
AI-assisted Dev: GitHub Copilot, Claude Code

PROFESSIONAL EXPERIENCE

Software Developer, NexGen Jan 2023 to Dec 2023

Progressed from Software Developer Intern to Junior Developer over the year.

- Delivered 10+ REST API endpoints across three client-facing modules using Java, Spring Boot, and Spring Data JPA within a six-person Agile team.
- Refactored service and data access layers to remove N+1 query patterns, cutting average API response time by 30 percent and database round trips by more than 40 percent.
- Integrated backend APIs with React frontend components across three product modules and resolved 15+ defects during QA and pre-production, reducing the open bug backlog by about 40 percent.
- Modeled and queried relational data with Spring Data JPA and Hibernate on MySQL, building CRUD operations and service-layer business rules for three production modules.
- Wrote automated unit tests with JUnit 5 and Mockito to about 80 percent coverage, catching regressions before release and validating logic independently of the database.
- Worked through Agile sprint ceremonies, Git branching, and pull request reviews in Jira, contributing to weekly code reviews across the team.

Flutter Developer Intern, Technobyte Dec 2021 to Mar 2022

- Built Flutter user interface features in Dart for three mobile releases, integrating MySQL-backed REST services and writing reusable components.
- Consumed and tested REST API endpoints, handling JSON responses and error states across multiple screens.
- Resolved 10+ QA-reported defects and supported post-release fixes, coordinating with a cross-functional team through structured QA handoff.

PROJECTS

Ledger-Core, Banking REST API Jan 2026 to Present

Java 21, Spring Boot, Spring Security, PostgreSQL, Redis, Apache Kafka, Kubernetes, Flyway, JUnit 5, Docker, GitHub Actions

Repository: github.com/anishbasnetAB/ledger-core | Live demo: ledger-core-frontend-anish.vercel.app

- Built a Java 21 and Spring Boot REST API for account creation, deposits, withdrawals, and transfers on PostgreSQL, using ACID transactions, optimistic locking, and double-entry bookkeeping and an append-only ledger to keep balances consistent under concurrent load.
- Implemented idempotent transfers validated against 1,000 automated attempts with zero duplicate postings, using BigDecimal money handling to avoid floating-point errors.
- Secured the API with Spring Security login and signup, JWT authentication, and role-based access control, and added automated reconciliation to verify ledger integrity.
- Added a Redis caching layer with request rate limiting and a Kafka producer and consumer with idempotent consumers for publishing and processing ledger events.
- Backed the service with 50+ JUnit 5 and Mockito tests for rollbacks, duplicate transfers, and concurrent withdrawals; containerized with Docker, versioned the schema with Flyway, deployed a 3-replica Kubernetes setup, and shipped via a GitHub Actions CI/CD pipeline.

CERTIFICATIONS

AWS Certified Cloud Practitioner, Amazon Web Services | Issued July 2026

EDUCATION

Postgraduate Diploma, Computer Software Engineering Jan 2024 to Dec 2025

Lambton College, Ontario, Canada

BSc (Honours) Computer Science, First-Class Honours Jan 2019 to Sep 2022

London Metropolitan University, United Kingdom
