ANISH BASNET

Software Developer · Java & Spring Boot · REST APIs & Full Stack

Mississauga, ON · theanishbasnet@gmail.com · anishbasnet.com · linkedin.com/in/theanishbasnet · github.com/anishbasnetAB

PROFESSIONAL SUMMARY

Junior Software Developer with a **BSc in Computer Science (First Class Honours)** and 1+ year of professional experience designing and shipping **Java REST APIs, Spring Boot microservices, and full stack web applications**. Built production-style systems including a Spring Boot banking API with ACID-compliant transactions and a distributed trading engine processing 1.6M orders/sec. Skilled in **PostgreSQL, JPA/Hibernate, Redis, Docker, GitHub Actions CI/CD, and React 18**. Experienced with Agile/Scrum, TDD, and code review workflows. **Valid PGWP — no sponsorship required.**

TECHNICAL SKILLS

Backend	Java 21, Spring Boot, Spring MVC, Spring Data JPA/Hibernate, Flyway, Maven, REST APIs, Microservices, Node.js
Frontend	React 18, TypeScript, JavaScript (ES6+), HTML5, Tailwind CSS, Responsive Web Design
Data & Messaging	PostgreSQL, MySQL, MongoDB, Redis, Kafka, SQL, ACID Transactions, Relational Design, NoSQL
Testing & DevOps	JUnit 5, Mockito, AssertJ, TDD, Docker, Docker Compose, GitHub Actions CI/CD, AWS (fundamentals), Linux
Languages	Java 21, C++20, Python, TypeScript, JavaScript, SQL
Methodologies	OOP, SOLID, Code Reviews, Agile/Scrum, Jira, Git, Postman
AI-assisted Dev	GitHub Copilot, ChatGPT, Claude Code, Cursor

PROFESSIONAL EXPERIENCE

NexGen · Junior Software Developer Jan 2023 – Dec 2023

Internship (Jan – Apr 2023) progressing to Junior Developer (May – Dec 2023)

- Designed and shipped 10+ production REST API endpoints using Java, Spring Boot, and Spring Data JPA/Hibernate against a MySQL database, serving 3 client-facing product modules within a 6-person Agile/Scrum team tracked in Jira.
- Refactored a high-traffic service layer to eliminate N+1 query patterns using JPA fetch strategies, reducing average response latency by ~30% and cutting database round-trips by over 40% on key endpoints.
- Integrated backend APIs with React.js frontend components across 3 product modules; identified and resolved 15+ pre-production defects through systematic debugging with Postman and log analysis, shrinking the bug backlog by ~40%.
- Enforced TDD practices maintaining >80% unit test coverage using JUnit 5 and Mockito; authored integration tests and participated in weekly peer code reviews via Git pull requests, improving team code quality and reducing regression rate.

Leapfrog Technology · Student Partner Jan 2022 – Dec 2022

- Completed 200+ hours of structured industry training covering React.js, Node.js, REST API design, and JavaScript; delivered 4 collaborative team exercises applying iterative Agile development, peer code reviews, and version control using Git.
- Built and presented a full stack capstone project integrating a Node.js backend API with a React frontend, applying component-based architecture, REST conventions, and documented code standards aligned with professional engineering practices.

Technobyte · Flutter Intern Dec 2021 – Mar 2022

- Built and shipped mobile UI features across 3 feature releases by integrating Flutter frontends with MySQL-backed REST services; resolved 10+ QA-reported defects reducing the release cycle defect rate by ~25%.
- Collaborated with a cross-functional team to implement UI improvements based on user feedback, writing clean Dart code, maintaining component reusability, and coordinating fixes through structured QA handoff processes.

PROJECTS

Ledger-Core — Spring Boot Banking API Jan 2026 – Present Live Demo | GitHub

Java 21 · Spring Boot · Spring Data JPA/Hibernate · PostgreSQL · Flyway · JUnit 5 · Mockito · Docker · GitHub Actions

- Architected a production-style financial REST API with a layered service architecture implementing account management, double-entry ledger bookkeeping, fund transfers, and automated reconciliation across a PostgreSQL schema managed by 8 Flyway migrations.
- Engineered ACID-compliant transactions with optimistic-locking concurrency control — stress-tested under 10 concurrent threads with 0 overdrafts and 0 duplicate charges across 1,000 idempotency retries; deployed with ~99.9% uptime on Render + Neon PostgreSQL.
- Delivered 50+ unit and integration tests across 5 suites (JUnit 5, Mockito, AssertJ) covering failure injection, concurrency, and edge cases; automated full build and deployment pipeline via GitHub Actions CI/CD and Docker.

EDUCATION

BSc Computer Science, First Class Honours London Metropolitan University · Jan 2019 – Sep 2022

Postgraduate Diploma — Computer Software Engineering Lambton College · Jan 2024 – Aug 2025
